

Ben Hudelson, MBA

Software Engineering & Operations Leader · Healthcare Technology

Richmond, KY · 317-809-9397 · benhudelson@gmail.com · linkedin.com/in/benhudelson · benhudelson.com

SUMMARY

AI engineering and operations leader behind Trimedx's Predictive Work System, a remote-monitoring platform for high-value medical imaging devices. Sixteen-plus years across software, R&D, data science, and application engineering.

- Cut Trimedx's cost to serve customers by more than **\$9M annually**, growing the connected fleet **50% on flat headcount**.
- Moved the engineering team to AI-native development across the SDLC, kept there by tight scope discipline and domain-tuned custom skills.
- Owner of the multi-year technical roadmap and platform vision for PWS, the direction the engineering organization executes against today.
- Rebuilt team engagement from **8.7/10 (2020) to 9.8/10 (2023)**, then held direct reports above the company benchmark every year since, finishing 2025 at a perfect **10.0, +2.7 over the company average**.

SKILLS

AI / LLM Engineering: Context engineering; graph engineering; agent loops; prompt engineering; cost / latency tradeoffs; MCP servers; agentic harness skills authoring; Anthropic SDK & Claude API (Opus / Sonnet / Haiku); OpenAI Codex; GitHub Copilot **Leadership:** AI engineering transformation, engineering & operations management, hiring & comp banding, capital / expense budget ownership, performance management, agile transformation coaching, AI transformation coaching, Kanban **Languages:** Python, SQL, C#, TypeScript, React, Angular, Bash, SPL **Data / Infra:** PostgreSQL, Snowflake, SQLite, Splunk, Azure, Red Hat Enterprise Linux **Healthcare:** DICOM, PHI scrubbing, HIPAA, medical device cybersecurity, clinical data integrity, medical-device IoT monitoring, CMMS integration, matrixed organizations **Tooling:** Git, Jira / Jira Align, ServiceNow, Linear, Obsidian

PROFESSIONAL EXPERIENCE

Trimedx LLC, Indianapolis, IN · Sept 2017 – Present

Trimedx delivers clinical engineering services, clinical asset informatics, and medical device cybersecurity at over 4,500 locations.

Manager, Application & Software Engineering, Predictive Work System (PWS) · May 2023 – Present

Promoted to own development and operations of Trimedx's medical-device IoT diagnostic platform; lead three teams, including Engineering and Operations, with 9 engineers: 3 staff, 4 senior, 2 mid-level.

- **Grew the PWS connected fleet by 50% with a flat headcount, reducing Trimedx's cost to serve customers by more than \$9M annually.**
- **Owner of the multi-year technical vision for PWS** that sets the platform direction the engineering organization is executing against today.
- **Hired senior talent into the team's two biggest capacity gaps:** a Senior AI Engineer leading PWS AI initiatives and a Senior Operations Engineer leading the operations transformation.
- **Restructured Operations into a dedicated team** that scales coverage faster than headcount. Eliminating process bottlenecks with a bias for automation, simplifying each procedure until our team no longer runs it and a field technician with no PWS background does.
- **Led the engineering team through a full transition to AI-native development practices**, embedding AI tooling and agentic workflows across the SDLC. Made it repeatable with progressive disclosure, tight scope discipline, and custom skills tuned to the domain.
- **Held direct-report engagement above the company benchmark in all three years of the PWS era**, finishing 2025 at a perfect 10.0, +2.7 over the company average.

- **Lead PWS engineering and operations under Trimedx's SOC 2 Type 2, ISO/IEC 27001, and ISO 13485 certifications**, supporting the controls and audit evidence for the platform; PWS scrubs and de-identifies PHI in flight so it never persists, under HIPAA and medical device cybersecurity requirements.
- **Patents & IP.** Manage the engineering team behind a granted patent on predictive work order devices, systems, and methods, plus two continuations in active prosecution. Authoring continuation claims with corporate counsel.
- **Built custom operational tooling** that tracks team activity and flags bottlenecks, giving Operations the data to prioritize the right process improvements. Python backend joining Snowflake and Splunk data, used daily.

Manager, Application & Software Engineering, Enterprise Applications · Oct 2020 – May 2023

Promoted to lead Trimedx's enterprise application portfolio; 6 direct reports plus seasonal interns and project contractors; 30+ vendor relationships; owner of capital and expense budgets.

- **Rebuilt team engagement from 8.7/10 (2020) to 9.8/10 (2023)** across the team, sustaining it through the transition into the PWS era.
- **Sponsored my engineers for promotion and recognition:** three promoted in two years, three company-wide recognitions earned by engineers I mentored.
- **Agile coach** to scrum masters, product owners, and product managers, coaching technology teams across the portfolio to adopt cross-functional value-stream teams.
- **Built training and continuing-education programs** to keep engineers technically current.
- **Owned both capital and expense budgets;** partnered with peer leaders to identify and eliminate unnecessary spend.

Senior Software Engineer / Product Owner / Technical Lead · Sept 2017 – Oct 2020

- **Productized PWS from an R&D prototype:** replaced the MSSQL data tier with Splunk for unstructured ingest and alerting, then layered a Python service that turned detected issues into CMMS work orders. Built and presented the case to an executive sponsor that converted PWS from research project to organically supported product line, on the back of **400% device-coverage growth in two years**.
- **Stood up the Trimedx data science program:** led technical execution, coached product development, and contributed to the multi-year roadmap.

Adjunct Professor (part-time), Butler University, Indianapolis, IN · Aug 2019 – May 2020

Recruited to write and deliver the Health Care Information Systems curriculum for undergraduate seniors, covering the role of technology and analytics in modern healthcare.

Competency Lead / Senior Consultant, Fusion Alliance, Indianapolis, IN · Aug 2015 – Sept 2017

- Full-stack web application architect and engineer across multiple Fortune 500 / mid-market engagements; led initiatives to implement and improve source-control and work-item tracking. Mentored four direct reports and assisted hiring of new staff.

Earlier Experience

Various software development, systems analysis, and IT roles, 2006 – 2015.

PERSONAL ENGINEERING

Running Coach Mobile App: full-stack mobile + web AI running coach built with spec-driven, AI-enabled workflows, including a custom Claude Code skills library (React Native, Auth0, PostgreSQL).

EDUCATION & CERTIFICATIONS

MBA, Butler University, Indianapolis, IN, 2019 · *Outstanding Student Award · Business School Honors Society*

BS Mathematics, Purdue University, Indianapolis, IN, 2012

United States Air Force Reserve, 434th Civil Engineer Squadron, 2000 – 2007

Certifications: PCAP Certified Associate Python Programmer · Professional Scrum Master I · Advanced Certified Scrum Master · SAFe Practitioner · SAFe PO/PM
